

Kaseya Antivirus 1.1 Upgrade Best Practices Document

Before installing the KAV 1.1 upgrade, verify that the following prerequisites have been met:

- Verify that Kaseya Server K2 (6.0.1 or later) is installed
- Verify that all available hotfixes have been applied
- Verify that the user performing the installation on the server has administrative privileges

KAV Client prerequisites:

[none]

KAV 1.1 - Upgrading the KServer

- NOTE - Uninstallation of the previous version of KAV is NOT required
- Download and run the KAV 1.1 Executable on the K-Server (accept all installer default options during installation)
- NOTE - No reboot or any other action is required

Upgrading the Client

[not necessary]
